

# Liongard Security Posture Overview

## Your Trust, Our Commitment to Excellence

At Liongard, security isn't just a feature, it's our foundation. We deliver peace of mind by maintaining a secure and resilient platform, built to meet and exceed the highest industry standards. Here's how we ensure the integrity and safety of our platform:

### Data Encryption: Uncompromising Protection for Your Information

Your data, your control. Liongard encrypts all user data, ensuring that only the creator has access. With no access to encryption keys, we guarantee your data stays yours. Every transmission—whether via platform or agents—is secured with HTTPS, safeguarding your data in transit and maintaining its integrity.

### Physical Security: Fortresses for Your Data

Liongard's cloud platform is hosted in state-of-the-art data centers fortified with multi-layered security. Features like biometric authentication, 24/7 video surveillance, and dedicated, locked cabinets create an impenetrable barrier for unauthorized access.

### Network Security: Securing Your Front Lines

Our platform employs advanced firewalls, intrusion detection and prevention systems (IPS/IDS), and web security appliances. These layers of protection ensure network integrity and shield your operations from threats.

### Audits and Certifications: Independent Validation of Our Commitment

Liongard regularly undergoes rigorous audits by internationally recognized firms, achieving SOC 2 Type 2 compliance and aligning with HIPAA and PCI controls. With US Data Protection Framework (US DPF) certification underway, we remain steadfast in validating our security posture.

### Cyber Asset Discovery Security: A Foundation of Hardened Resilience

The Liongard Platform operates on a hardened Linux OS with no open ports or listening services. By securing communication with SSL encryption, we deliver uncompromising reliability and security.

## Data Center Security: Rock-Solid Infrastructure for Peace of Mind

Our data centers are built to withstand the toughest challenges, combining robust physical safeguards with advanced operational controls to ensure your data remains secure and available - enabling you to support your clients without interruption.

## Secure Coding Practices: Crafting Security from the Ground Up

Liongard's development processes are designed for precision. From comprehensive code reviews to penetration testing, we follow OWASP Top 10 best practices, ensuring every line of code is secure. Our engineers are continuously trained in secure software development to anticipate and mitigate vulnerabilities.

## Incident Management and Business Continuity: Prepared for the Unexpected

Our comprehensive Business Continuity Plan ensures uninterrupted service and rapid recovery in the event of incidents. Predefined communication protocols keep you informed, while ongoing risk assessments by leadership ensure alignment with evolving security priorities.

## Vendor and Third-Party Risk Management: Trust Built Across the Ecosystem

All vendors and third-party providers are held to Liongard's strict security and privacy policies. Detailed audit logs provide full transparency and traceability, ensuring alignment with our commitment to safeguarding your data.

## Compliance: Leadership in Security Standards

Liongard stays ahead by adhering to evolving security standards and collaborating with industry leaders for third-party validation. Our commitment to compliance reinforces our promise of trust and integrity.

## Trained, Certified Security Experts: People You Can Rely On

At Liongard, security is a shared responsibility, upheld by a team of seasoned experts. Our team of seasoned security experts brings years of experience and holds a range of industry-recognized certifications, equipping them to address even the most complex security challenges.

Liongard's multi-layered approach to security reflects our unwavering dedication to safeguarding your operations, data, and reputation. With us, you can focus on growth, knowing your data and systems are protected by a platform built on trust, innovation, and excellence.
